Group Project – Group 04

Netflix Case study

User Guide

Figure 1: Netflix logo, (Nisha, 2023)

Acknowledgement

As the students of group 4, we would like to express my sincere gratitude to Dr. Mrs. Toshini Kumarika for her invaluable guidance and support throughout this module. Her expertise and dedication have been instrumental in enhancing my understanding and skills. I would also like to thank all group members for their collaboration and teamwork. Their contributions and commitment have been essential to the successful completion of this assignment.

Thank you all for your encouragement and assistance.

Introduction

This tutorial offers detailed instructions for configuring and launching a Spring Boot backend with a React frontend. React is used in the frontend build process, and IntelliJ IDEA is used for the backend, which is powered by Spring Boot.

Prerequisites

- Node.js and npm installed
- installed the Java Development Kit (JDK)
- installed IntelliJ IDEA
- Installed Git (version control optional)

Step-by-Step Guide for Backend

1. Setting Up the Backend (Spring Boot)

1.1. Generate the Project using Spring Initializer

- Open your web browser and navigate to Spring Initializer.
- Configure your project with the following settings:
- Project: Maven Project

- Language: Java
- Spring Boot: 2.7.0 or later

Project Metadata:

- Group: com.example
- Artifact: Netflix
- Name: Netflix
- Package name: com.example.Netflix

Dependencies:

- Spring Web
- Spring Data JPA
- MySQL Driver (or H2 for in-memory database)
- Thymleaf
- Lombok
- Hibernate

Click on Generate to download the project as a .zip file.

Extract the .zip file to your desired directory.

1.2. Import the Project into IntelliJ IDEA

Open IntelliJ IDEA.

Click on File -> Open.

Navigate to the extracted project folder and select it.

IntelliJ will automatically detect the project and import it.

1.3. Configure Application Properties

- Open src/main/resources/application.properties.
- Configure the necessary properties, such as database connection details:

application.properties

```
spring.application.name=netflix-backend
spring.datasource.url=jdbc:mysql://localhost:3306/Netflix
server.port=3000
spring.datasource.username=root
spring.datasource.password=
spring.datasource.driver-class-name=com.mysql.cj.jdbc.Driver

spring.jpa.hibernate.ddl-auto=update
spring.jpa.show-sql=true
spring.jpa.properties.hibernate.format_sql=true
server.error.whitelabel.enabled=false
```

2. Then we can develop the source code for the Backend as we created it in Erp-Final-Group-04-Source Code.

2.1. Run the Spring Boot Application

1. Locate the main class annotated with `@SpringBootApplication` (e.g., `NetflixApplicationTest.java`).
2. Right-click on the main class and select Run.
3. The Spring Boot application should start, and you can access it at `http://localhost:3000`.

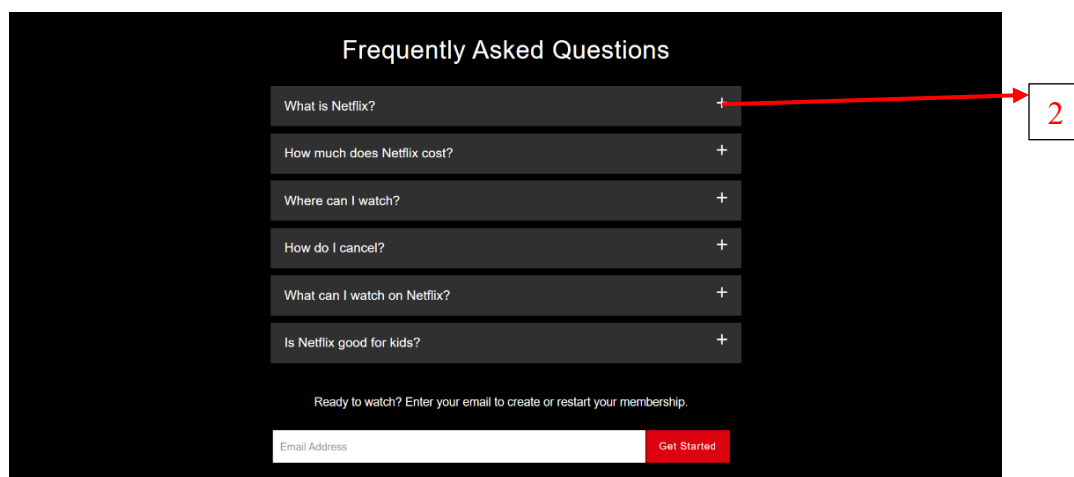

Step-by-Step Guide for Frontend

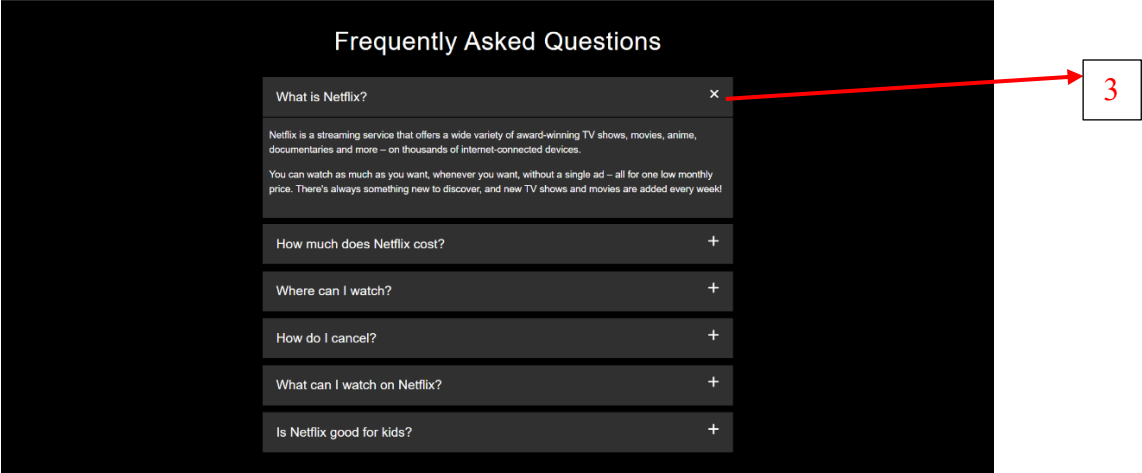

1.Setting Up the Frontend (React)

1.1 Create a React Application

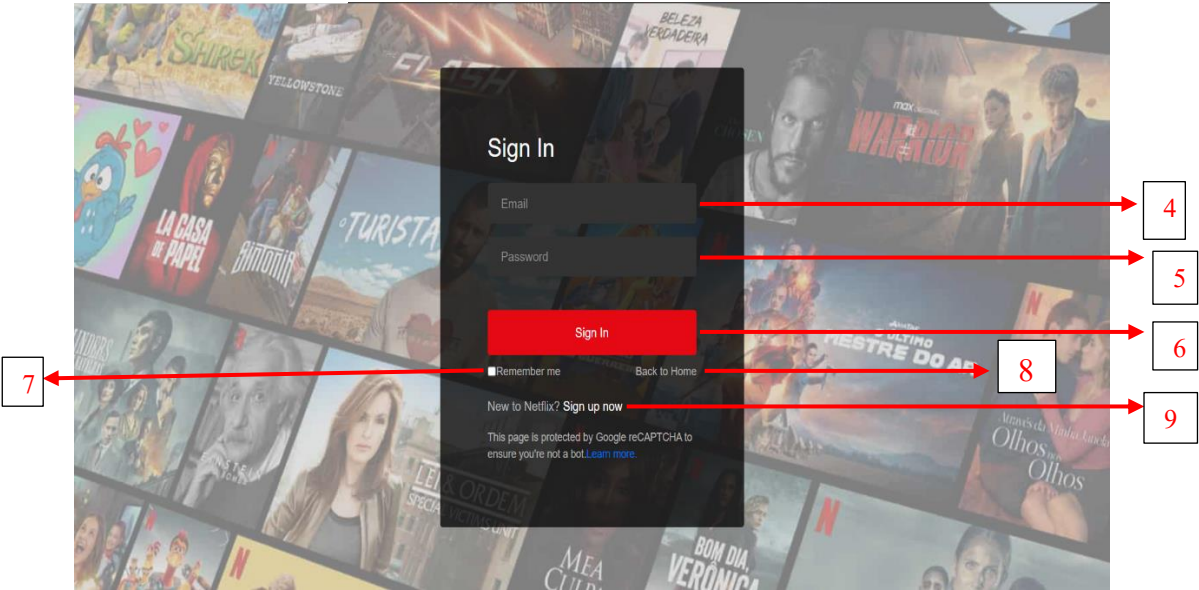

1. Open your terminal or command prompt.
2. Navigate to the directory where you want to create the React application.
3. Run the following command to create a new React app:
 - `npx create-react-app netflix-frontend-main`

4. Then you can update your js files and json files to obtain desired interface for your frontend.

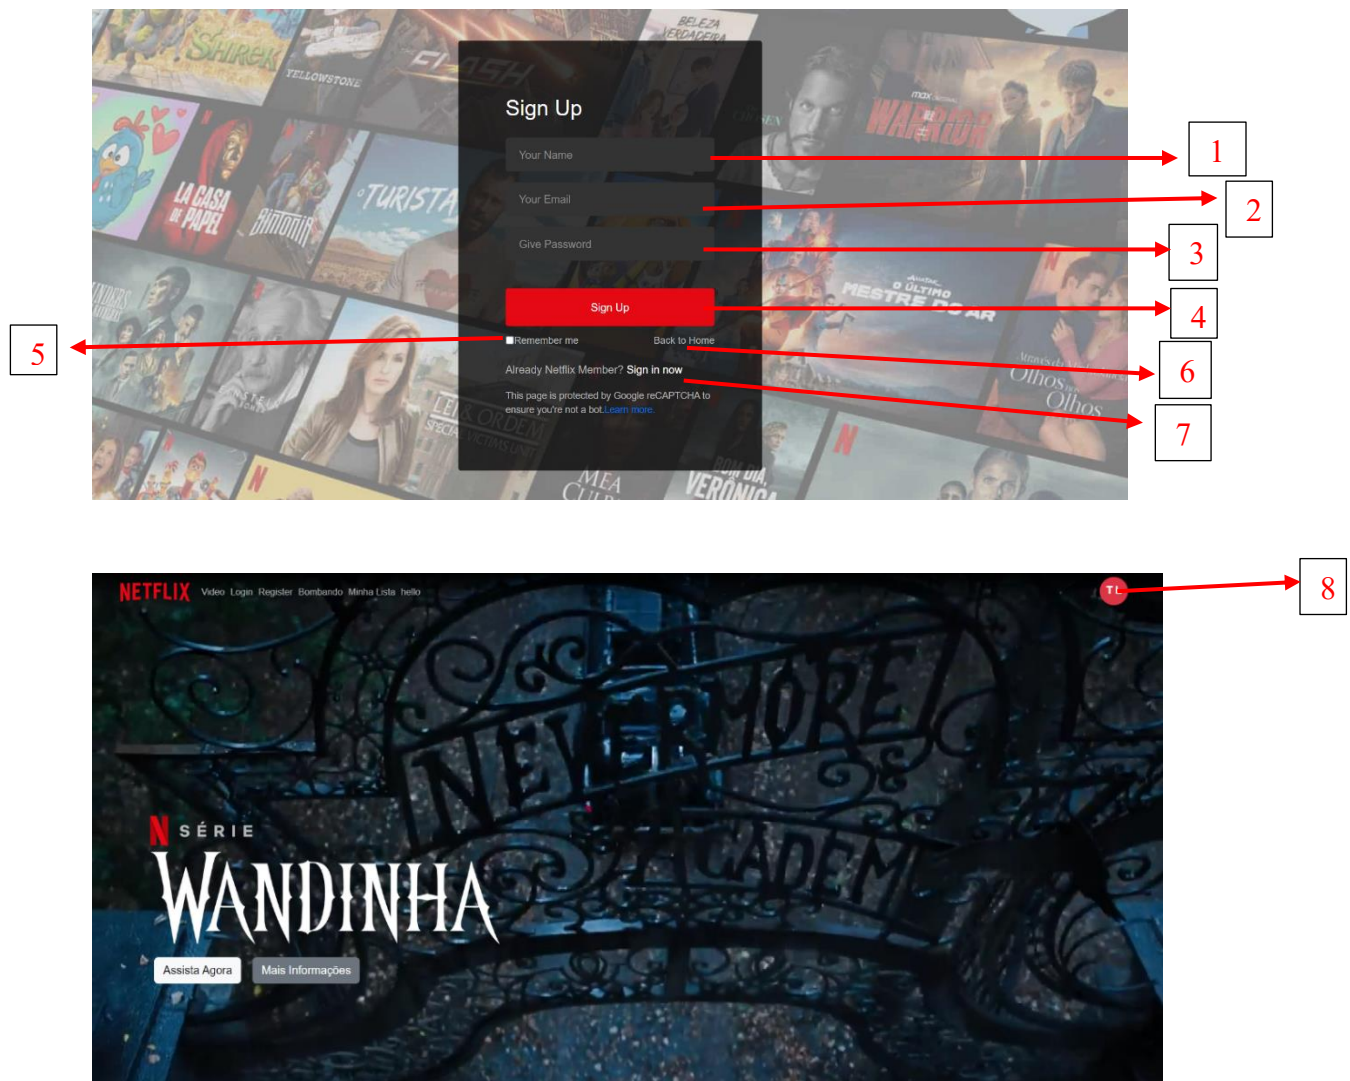

Sign In Form

Text box No:	description
1	Press Sign in button to sign in
2	Frequently asked question in system
3	Answers for question
4	Enter email
5	Enter a password
6	Sign in button

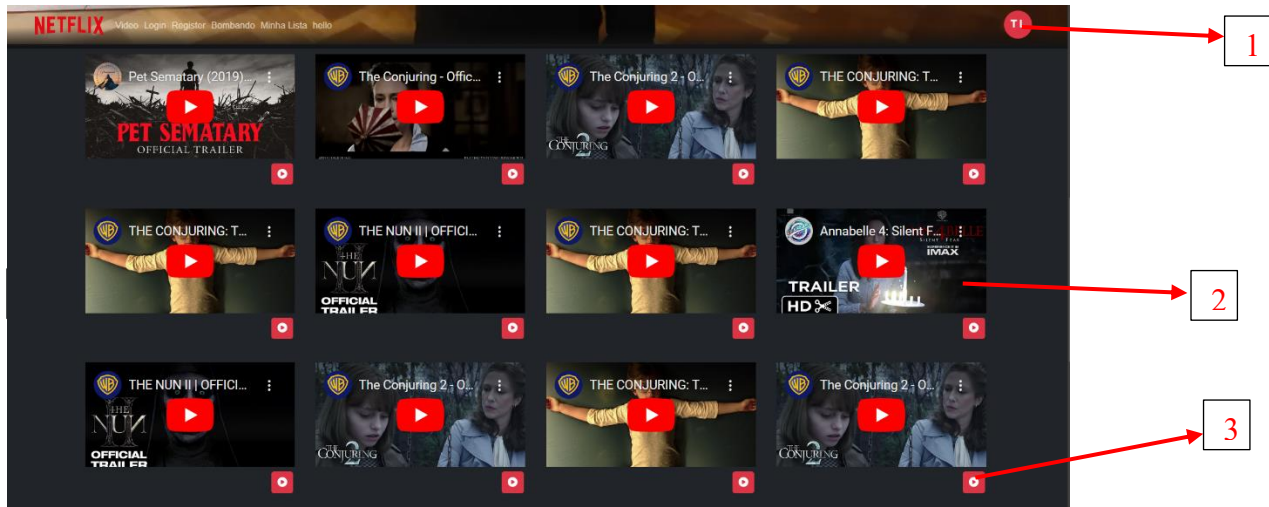

7	Remember you when you logged in again
8	Go back to home page
9	Sign up if you don't have account

Sign Up Form

Text No:	box	description
1		User's first name and last name
2		User's email
3		Create a password
4		Sign up button
5		Remember the user when logged in again
6		Go back to home page
7		If have account, then sign in
8		When logged in displaying icon of the profile

Video Categories Distribution

Views Over Time (Weekly)

Our platform, highlights key data such as the most and least viewed videos and the most active user. It includes a bar chart displaying the distribution of video categories, showing how many videos are available in each genre like Horror, Hollywood, and K-Drama. Additionally, a line graph tracks the number of views over time on a weekly basis, helping users understand viewing trends.

The map feature visually displays global data with color-coded countries. Each country's shade of red indicates data presence and intensity, which can be interpreted using the color scale at the bottom. The scale shows the data range, helping users quickly grasp the distribution and magnitude of information across different regions.

Conclusion

Following this guide, you should be able to set up and run your React frontend and Spring Boot backend applications. Ensure all configurations are correct and dependencies are installed. For any further assistance, refer to the official documentation or community forums.
